

## Geosites

① **Cerro del Sol.** In this site different types of volcanic rocks corresponding to the youngest lithology of the Geopark are exposed.

Another attraction of the Cerro del Sol, called Yucunchi in Mixteco, are panoramic views; strata of the different types of rocks and lithologic contacts affected by the activity of regional faults can be seen .

Viewpoint of the eastern slope of the Cerro del Sol

Scarps developed at Cerro Verde, known as Totondusa in Mixteco.

On the trail you can find different archaeological remains and lamabordos systems.

The northern slope of Cerro del Sol is characterized by the existence of a well-preserved oak forest.

Oaxaca

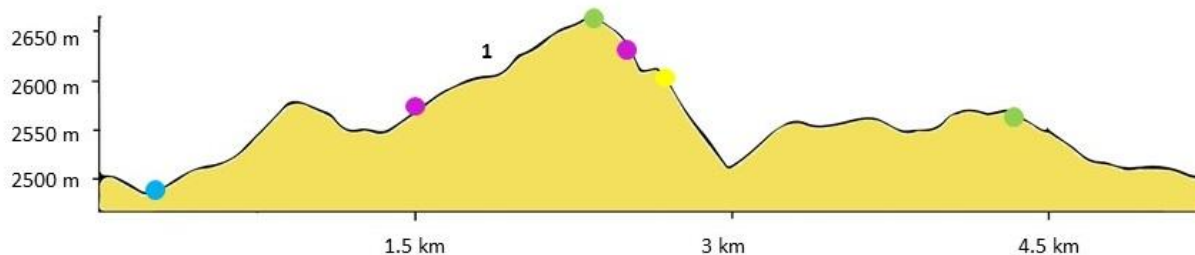

## Geotrail Cerro del Sol

**Length : 5 km**

**Min. Altitude : 2500m**

**Max. Altitude : 2650m**

The name of this site is derived from the mountain of the same name, whose summit is an archaeological site. Profound erosion exposes rocks where the soils have been totally removed.
